The series **505 COTTMark®** is an architectural version of Cott's highly durable field proven right of way marker system. Manufactured from special thermoplastic alloys that have the look and texture of granite, sandstone or marble, the **COTTMark 505** is specifically designed for use in areas where conventional linemarkers clash with building styles or codes. Available in several designs and sizes, these faux stone **COTTMarks®** enable utilities to be good neighbors while marking:

- Telephone Cables
- Electric Cable
- Television Cables
- Petroleum Pipelines
- Gas Pipeline
- Water Pipelines
- Chemical Pipelines
- Sewer Lines

FEATURES

STRONG AND MAINTENANCE FREE- Molded from engineering grade plastics, **COTTMark®** has twice the impact resistance of aluminum, four times the resistance of PVC yet weighs 1/8 as much as a steel post. Unlike metal signs, **COTTMark®** will not corrode, shatter or peel. The integral color never requires painting to preserve its factory appearance. Maintains complete dimensional stability from -40°F (-40°C) to + 175°F (80°C).

GUARANTEED- Patented graphic system molds signs directly into **COTTMark®**. The warning sign is guaranteed not to fade, peel or disbond for the life of the linemarker. All warning signs are custom designed for each utility or pipeline and conform to the spirit and letter of US Department of Transportation Regulations 192.707 and 195.410.

SAFE- Non-conductive plastic drastically reduces shock hazard from induced current or short circuits. All plastic construction virtually eliminates impact damage to vehicles and people.

COLORS

White Marble, Gray Granite and Tan Sandstone are standard Cott colors.

SIZES

4" Square
Post with Finial
4' to 6' tall

6" Stone
Bollard
